WHAT DIFFERENTIATE US?

Our Differentiated **Capabilities, Experience, And Innovations** Make Us Your 'Digital Partner' Of Choice.

Client-centric

Quality Focus

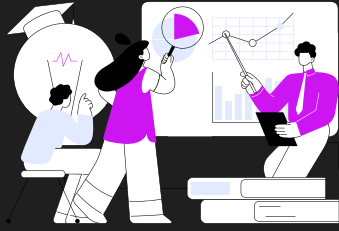

Dedicated Team

Data Security

Project Tracking

Comprehensive Research

On-Time Delivery

Certified Experts

Latest Tech Stacks

Resources Across Time Zones

PARTNERSHIP MODELS.

Choose your desired
Partnership Model based on your business needs.

FIXED SCOPE

Our clients define the scope and we guarantee a fixed budget and timeline for their project.

TALENT ON DEMAND

Improve your productivity using our skilled dedicated professionals who work with your team

DEDICATED TECH TEAM

We assign a dedicated team of Designers, Developers, Project Manager & QA led by tech architect.

OUR PARTNERS.

SUCCESS STORIES.

Apoorva came in and not only took over the full backend technology but also built an amazing team of talented engineers who were hungry to make an impact. He optimized our technology function end to end starting from building an in-house technology team.

Ashit Joshi | Ex Director of Engineering Chegg
Chegg

Gaurav is super good at troubleshooting issues and does necessary research and identifies the approach/root cause. Given a problem he comes up with quick proposals/solutions with the required amount of research.

Sathishkumar Subramaniam
amazon

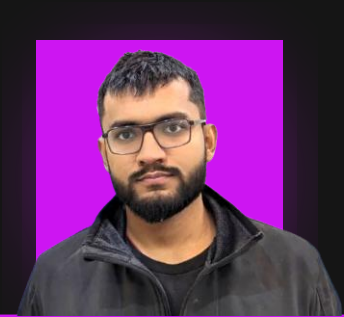

Origins-AI helped us improve our tech operations from start to finish. Team guided us as we moved from a single instance to Kubernetes and made sure everything was deployed smoothly in our clients' environments. Thanks to Team, we scaled up quickly and closed multiple sales.

Jugal Anchlia | Founder and CEO

MEET THE PEOPLE BEHIND ORIGINS AI.

APOORVA KUMAR
Founder | IIT KGP, CSE

Apoorva wears many hats – engineer, founder, problem-solver, and someone deeply passionate about building things that work at scale.

At Origins AI, I bring years of experience working with multi-cloud infrastructure across AWS and GCP, with a strong focus on optimizing costs and making systems more efficient. Over the years, I've deployed everything from high-traffic Kubernetes services to secure, compliant setups for critical systems – including a neobank.

I love working with code (Golang, Python, Java are my go-tos), but I enjoy mentoring teams and solving real-world problems even more. Leading projects, refining code, and finding elegant solutions are what keep me excited every day.

At the heart of it, I care about building tech that's not just smart, but sustainable – helping businesses scale without burning through resources.

GAURAV JHA
Co-Founder | IIT KGP, CSE

Gaurav brings deep expertise in AI-driven systems and scalable backend development. With a strong foundation in Java and years of experience building high-performance applications, he has architected intelligent systems that are both efficient and adaptable.

His work spans training and deploying machine learning models, integrating AI pipelines into real-time products, and optimizing backend architectures to handle complex logic and data flows. Gaurav has also led initiatives in data engineering, model evaluation, and system performance tuning – ensuring that AI solutions not only work but deliver value at scale.

At Origins AI, Gaurav focuses on building the intelligence layer – marrying data, algorithms, and backend infrastructure to create products that think, learn, and grow.

THANK YOU.
